

AMENDMENTS TO THE SPECIFICATION:

Please replace the paragraph beginning at line 26, page 3 with the following replacement paragraph:

Typically, diagnosis or treatment of cardiac disorders, such as cardiac arrhythmia, requires introducing a catheter into the heart as disclosed, for example, in U.S. Patent Nos. ~~5,147,305~~ 5,147,355 and 4,641,649. However, as described above, the constant contraction and relaxation of the heart muscle, together with the pulsating flow of blood therethrough, makes accurate placement of catheter difficult even in the best of circumstances.
